Introduction

Every year Auckland University of Technology (AUT) Faculty of Health and Environmental Sciences host a research roadshow to provide staff and postgraduate research students an opportunity to showcase their work, network, exchange/share ideas and collaborate to generate new opportunities for research.

Methods

Members of the AUT Child and Youth Health Research Centre presented a combined power-point presentation where each project was allocated one slide.

Findings

Ten research projects were presented that spanned across 4 schools. The types of research included 7 empirical designs 1. Using participatory video to explore the perceptions and understandings of health and wellbeing among refugee background youth in Aotearoa New Zealand, 2. Creating a community engaged research agenda for Tamariki with Asthma, 3. The role of serious games and youth as co-designers in future healthy and sustainable city world-building, 4. Decolonising and democratising Malawian public health: A photovoice collaboration with families exploring daily meals associated with a rise in diabetes, 5. Strengthening Pacific voices through Talanoa participatory action research, 6. The creating space project, 7. Children and young people's participation in activities that inform the planning, implementation, and evaluation of service delivery in Children's Hospitals in New Zealand; two integrative reviews 8. Children and young people's self-reported experiences of asthma self-management nursing strategies across various settings; 9. Factors that Influenced the experiences of paediatric nurses during the COVID-19 Pandemic and one meta-analysis 10. Risk and protective factors of adolescent suicidality.

Conclusion

All together there were 30 exhibition presentations including 26 individual sessions over the day (VIMEO recording).
